### Key Elements and Features

#### Real-Time Dispatch & Scheduling:

Manage orders, trucks, and production from a single cloud-native platform with drag-and-drop scheduling, live truck visibility, truck demand alerts, Google Maps integration, and real-time updates that help dispatchers respond instantly to changing job conditions of concrete annually, ensuring reliability and performance at scale.

#### Connected Operations & Performance Insights:

Seamlessly connect dispatch, batching, delivery, and reporting workflows to eliminate manual handoffs, improve coordination, and provide real-time KPI dashboards that track fleet performance, plant utilization, delivery status, and operational efficiency.

# Comprehensive Feature Set

-  **Order Entry and Delivery Tracking**  
Streamlined processes and robust tracking capabilities for enhanced operational efficiency.
-  **Division Settings**  
Customizable settings for tailoring the system to specific operational requirements.
-  **Smart Search**  
Advanced search functionality for expedited access to critical information.
-  **Dynamic Truck Demand Graph**  
Real-time visualization of truck demand for proactive planning and resource allocation.
-  **Point-of-Sale**  
Streamlined transaction management for seamless customer interactions and sales processing.
-  **Pricing and Escalation Management**  
Granular management of pricing and escalation by product, customer, and project for optimized profitability.
-  **Commercial Truck Routing**  
Navigation is now fully integrated into the DeliveryGo driver experience, offering turn-by-turn directions and real-time route updates as conditions change.
-  **SMS Delivery Notices**  
Automated delivery notifications for improved communication.
-  **Truck Out of Service Notification**  
Real-time alerts for proactive management of truck availability and maintenance.
-  **Invoicing/AR**  
Advanced modules for efficient account receivable and invoicing processes.
-  **BI Dashboards and Reports**  
Actionable, real-time insights through comprehensive business intelligence tools.

## Customer Behavior and Prediction

ConcreteGo offers refined modules for optimizing and predicting customer behavior, driving targeted and effective business strategies based on data-driven insights.

## Open API's Make Integration Easy

ConcreteGo seamlessly integrates with a wide array of systems and platforms, including ERP systems such as SAP, JDE (JD Edwards), ViewPoint, Acumatica, and QC-related systems like Stonemont, Quadrel, Giatec, and AICrete, as well as offering truck scheduling optimization capabilities.

## Delivering the value of cloud-native business solutions

Sysdyne exists for producers who refuse to let yesterday's systems dictate tomorrow's results. In an industry where every truck minute matters, we believe technology should speed you up, not slow you down. That's why Sysdyne delivers a unified, cloud-native platform connecting quoting, batching, dispatch, delivery, invoicing, and analytics into one system and one source of truth. Built specifically for ready-mix operations, Sysdyne deploys in hours, not months, is easy to use and helps producers achieve measurable ROI in weeks while creating cleaner data, faster decisions, and a stronger foundation for AI-driven operations.
